

Digital Classrooms

The Division of Instructional Technology's strategic plan is to gradually convert all Registrar-scheduled George Mason University classrooms to versatile, digital media equipment. With this transition, faculty may increasingly find themselves scheduled in new facilities. Advancements include digital, high-definition widescreen video displays and HDMI auxiliary input ports at the instructor's console. These upgrades are intended to keep pace with new digital video signals that are replacing VGA connectors on laptops and other peripheral devices. Digital classrooms will continue to support VGA and composite analog video signals as they have in the past. Faculty using Mac laptops should acquire a video adapter, which is available through Apple and Patriot Computers. Macs currently have one of two video output ports—DVI or Mini DisplayPort—the correct adapter is needed to attach to the classroom's VGA or HDMI cable. This [reference guide](#) explains how to use a Mac in a digital media classroom.

Below are the digital rooms located on their respective campus. If assistance with classroom technology is needed, contact the appropriate Classroom Support for details of using this equipment for instruction.
